

AAIM

ACTIVE ATTACKER INCIDENT MANAGEMENT

*Real-World Incident Management Training for:
Public Safety, ISD Administration, and Business
Stakeholders*

COURSE OVERVIEW

The AAIM course takes the fundamental principles taught by the FEMA National Incident Management System (NIMS) and the Incident Command System (ICS), and breaks the information down into an everyday practical application environment that is directed at "on-the-ground" response personnel. In this course, participants learn by taking ICS fundamentals and linking them with current and best practices in public safety and unified response operations.

This course provides models to apply ICS principles on numerous scenarios that vary from a single vehicle accident to an active attacker incident.

ACTIVE ATTACKER INCIDENT MANAGEMENT

WHAT PEOPLE ARE SAYING

"Great Instructors. They gave us new tools/ideas to help in the field."

"Very good class masterly presented, and badly needed by every peace officer in the department."

"The class forced me to open my eyes and see the bigger picture. Officers tend to see things through a narrow lens. All officers could benefit from this class."

"This class NEEDS to be taught to All Troopers"

"Great breakdown of ICS300-400. Will definitely implement this in our ALERRT Trainings."

"Best ICMS training I've attended."
